Customer Analysis

Demographics, age groups & distribution patterns

Transaction Analysis

Volume trends, peaks & monthly fluctuations

Account Monitoring

Savings vs. Current balances & inactive accounts

Financial Insights

Outlier detection & balance anomalies

Transaction Insights

Key Observations

- **Equal credit/debit split** — balanced transaction behavior across all months
- **Peak months:** January, May & October drove the highest transaction volumes
- **Low activity periods:** February, March & June showed notable dips

Customer Insights

Demographic Breakdown

Gender distribution: 25% Male · 25% Female , a balanced customer base across account types.

Primary segment: Ages 0-25 represent the largest cohort, signaling strong GenZ adoption of banking products.

Account Insights

Account Distribution & Balances

Savings accounts at **50%** of total accounts, reflecting strong retail customer preference for deposit products. Current accounts represent **0%**, primarily held by business and professional segments.

Inactive accounts peaked in January, signaling a potential re-engagement opportunity for the customer success team.

Inactive Accounts — Monthly Trend

What the Data Reveals

January recorded the **highest inactivity spike**, surpassing the alert threshold a clear signal for targeted re engagement campaigns.

Activity recovered steadily from Q3 onward, with December returning near baseline levels.

Financial Irregularities & Outliers

Negative Balances

Accounts with large negative balances flagged potential overdraft risk or data entry errors requiring reconciliation.

Unusual Patterns

Irregular transaction sequences and balance anomalies surfaced recommended for compliance review and fraud monitoring.

Conclusion

Balanced Transaction Behavior

Credit and debit volumes remain equal, indicating stable, predictable customer financial activity

Seasonal Activity Dips

February, March & June consistently show lower volumes ideal windows for targeted marketing campaigns

Inactive Account Clusters

Recurring inactivity patterns reveal re-engagement opportunities before accounts become fully dormant.
